

OrganAlz Competitive Landscape Report

A close look at the **10 closest competitors** to OrganAlz, how we stack up feature-for-feature, and the market gap that positions OrganAlz to win. This report analyzes pricing, AI capabilities, and real weaknesses across the entire "save it and find it later" category — revealing a clear whitespace that OrganAlz is built to fill.

HACKATHON 2026

MARKET INTELLIGENCE

STRATEGIC POSITIONING

The Market at a Glance

The "save it and find it later" category has split into three camps — and **none of them solve the full problem**. AI-native second-brain apps auto-organize but skip entire file types. Legacy notebook apps are cheap but still make you file by hand. Single-format specialists do one thing well and ignore everything else. **Nobody** in this list automatically organizes screenshots, PDFs, voice notes, and documents together — with deadline detection and linked context — for free.

6

AI Behind Paywall

Competitors lock real AI behind paid or enterprise tiers

- ❏ **Methodology:** Current pricing, feature sets, and reviews for each competitor were researched directly from vendor pricing pages and independent 2026 reviews. Pricing and features change often in this category — treat figures as directional.

Three Camps, One Unfilled Gap

Every competitor falls into one of three categories — and each one leaves real user problems unsolved. The whitespace is clear: **no tool combines multi-format capture, automatic AI organization, and Smart recommendation on a genuine free tier.**

AI-Native Second Brains

mymind, Mem.ai

Auto-organize intelligently but skip entire file types — no voice, no video, no cross-format linking. Often no usable free tier.

Legacy Notebook Apps

Evernote, OneNote, Google Keep

Cheap or free, but still require fully manual filing. Real AI features are locked behind expensive paid tiers or enterprise plans.

Single-Format Specialists

Otter.ai, Google Photos, Rewind

Do one thing well — voice, photos, or screen recall — and ignore everything else. No cross-format intelligence whatsoever.

Knowing the market — Part 1

COMPETITORS 1–4

Ranked by closeness to OrganAlz's core idea: **capture anything, get it organized automatically.**

mymind — AI Second Brain

\$6.99–\$299/yr · No real free tier

AI image tagging and PDF summaries, but **no voice, no video, no folders**, and no deadline reminders. Solo-only with no collaboration. Purely visual thinkers.

Rewind AI (Limitless) — Screen & Meeting Recall

\$19–\$29/mo · Mac-only

GPT-4 "Ask Rewind" chat with embedding-based recall, but **Mac-only** with 20–30% battery drain. Meta's acquisition disabled core screen/audio capture in Dec 2025 — real product-continuity risk.

Mem.ai — AI Notes / PKM

Free capped at 25 chats & 25 PDF pages/mo · Pro \$12–15/mo

Semantic search and Mem Chat Q&A, but **built for typed notes, not screenshots or photos**. No Android app, no video support. AI-organization lead narrowing as Notion and Apple Notes catch up.

Evernote — Legacy Notes App

Free gutted to 50 notes · Starter ~\$8–11/mo, Advanced ~\$15–21/mo

Basic "AI Edit" bolted on in 2025–26, but **no automatic organization**. Renewal prices tripled for long-time users (from ~\$60/yr to \$250/yr). Fully manual notebooks and tags remain.

Knowing the market — Part 2

COMPETITORS 5–7

Three more competitors that dominate their niches but fall short on the core OrganAlz promise.

Notion (+ Notion AI) — All-in-One Workspace

Free (5MB file cap) · Full AI gated at \$20/user/mo

Notion Agent and AI Q&A exist, but **only on the \$20/seat Business plan**. Free tier's 5MB cap is too small for real screenshot/PDF libraries. Every structure — databases, tags, views — must be designed by hand.

Otter.ai — Meeting & Voice Transcription

Free capped at 300 min/mo · Pro \$8.33–\$16.99/mo, Business up to \$30/mo

Live transcription and AI chat over transcripts, but **voice only** — doesn't touch screenshots, PDFs, or images. Hard monthly minute caps that don't roll over. English, French, and Spanish only.

Raindrop.io — Bookmark Manager

Free · Pro \$3/mo adds Stella AI assistant

Fundamentally a bookmark manager — **no voice or video support, no deadline detection**. Collections are still built and nested by hand rather than forming automatically. Stella AI (Feb 2026) adds tag suggestions but not true auto-organization.

Knowing the market — Part 3

COMPETITORS 8–10

The final three competitors — household names with massive user bases, but each with critical gaps OrganAlz exploits.

Google Photos — Photo Library

Free 15GB shared · Google One from \$1.99/mo

AI "Ask" search and automatic albums, but **photos and video only** — zero PDF, voice note, or document support. Storage shared across entire Google account. Never reads on-screen text for deadlines or context.

Google Keep — Simple Notes

Completely free, unlimited notes

Basic OCR only — **real Gemini AI needs a paid Workspace plan**. No folders or notebooks, just a flat color-labeled list. Zero automatic organization of any kind on the free tier.

Microsoft OneNote — Notebook App

Free (5GB shared) · Full Copilot AI needs ~\$30/mo M365 Business

Fully manual notebook/section/page hierarchy that reviewers describe as **"getting messy fast."** Real AI requires a \$30/mo Copilot add-on most individuals will never buy.

OrganAlz Opportunity: All three either lock AI behind paid tiers or offer zero auto-organization with none of them covering diverse formats of files. OrganAlz delivers real AI sorting on a genuine free tier — from the first upload.

Feature Comparison Matrix

ORGANAIZ VS. ALL 10 COMPETITORS

A feature-by-feature breakdown across all ten dimensions researched.

OrganAlz is the only tool with checkmarks across every multi-format row and every AI organization row — on a free tier.

Feature	OrganAlz	mymind	Rewind	Mem.ai	Evernote	Notion	Raindrop	Otter.ai	G. Photos	G. Keep

OrganAlz, Honestly Assessed

Strengths and weaknesses are internal; opportunities and threats come from the market researched in this report. This SWOT reflects where OrganAlz stands today as a hackathon-stage product with a clear path forward.

Strengths

- Only tool that auto-organizes screenshots PDFs voice notes and docs together
- Genuine free tier with no file caps or minute limits
- Automatic collections and deadline and detecting document detection with zero manual setup
- Automatic collections and deadline detections
- Cross-platform via browser with no OS lock-in

Opportunities

- Evernote price high as to alternatives
- No competitor high and Notion AI paywall detection with multi-fMac power-users searching
- Growing demand for tools should be leads that don't require manual folders or tags

The Whitespace OrganAlz Is Built For

Four gaps showed up **consistently across all ten competitors** — and OrganAlz is positioned to own every one of them.

Nobody Covers Every Format

mymind and Mem.ai auto-organize but skip voice and video. Otter.ai and Google Photos each do one format well and ignore the rest. **OrganAlz treats screenshots, PDFs, voice notes, and docs as equally first-class.**

Deadline & Context Detection Is Almost Absent

Of ten competitors, **none reliably extract dates or deadlines from screenshots or documents** the way OrganAlz does. Most don't read file content at all — or only summarize text you typed yourself.

Real AI Organization Is Usually Paid

Notion locks AI behind \$20/seat. OneNote needs a \$30/mo Copilot add-on. Google Keep's AI requires paid Workspace. **OrganAlz's auto-tagging and auto-collections work on the free tier from the first upload.**

Free Tiers Keep Shrinking, Not Growing

Evernote's free plan is now a 50-note trial. Otter.ai caps free transcription at 300 minutes. mymind has no real free plan. **The market trends toward less free value — exactly when OrganAlz offers more.**

- ❏ **Unique Selling Point:** OrganAlz is the only researched tool that auto-tags, auto-collects, and auto-detects deadlines across screenshots, PDFs, voice notes, and documents together — for free, in the browser, from the very first upload.

Why OrganAlz Can Compete

Four reasons the gap identified in this report is one OrganAlz is uniquely positioned to fill — and why the timing is right.

1 Everything, Not Just One Format

Every close competitor picked a lane — notes, bookmarks, voice, or photos. OrganAlz is built to be the one place all of it lands, which is the actual problem people have. No more scattered files across five different apps.

3 Built for the Mess People Actually Have

Deadline detection and cross-format linking address the everyday reality of scattered screenshots and PDFs with names like *"264_Screenshot-4-06-2026_927376.jpg"* — not just tidy typed notes in a perfectly structured database.

2 AI That Works Before You Pay

Six of ten competitors gate their best AI behind a \$20–30/mo tier. OrganAlz's automatic organization — auto-tagging, auto-collections, deadline detection — is free from the first upload. No credit card required.

4 Small and Fast, On Purpose

A 3-person team means OrganAlz can ship the features this report identifies as gaps faster than incumbents can restructure their pricing or roadmaps. Speed is our structural advantage.

OrganAlz is the only researched tool that auto-tags, auto-collects, and auto-detects deadlines across screenshots, PDFs, voice notes, and documents together — for free, in the browser, from the very first upload.
